Ansaldo Energia: service contracts worth more than 50 million Euro with Enel in Italy

Ansaldo Energia, a Finmeccanica company and leader in the supply of components and services for power generation plants, has signed service contracts with Enel in Italy for a total value of more than 50 million Euro.

Under the contracts, Ansaldo Energia will replace the Westinghouse low-pressure steam turbines at the Brindisi Sud thermoelectric plant with the latest generation technologies. The work will enable an increase of the capacity of power generation of the plant and a reduction in emissions.

The contract comes in addition to the retrofit activities carried out by Ansaldo Energia since 2000 on the power stations at Cassano D'Adda, La Casella, Priolo Gargallo, Porto Corsini, Chiasso, Torrevaldaliga Sud, Puente Nuevo, Algeciras and Fusina.

This result confirms the growth of the service activities of Ansaldo Energia aimed at better understanding customer needs in terms of plant optimisation and improved performance.
